

# TECHNICAL PACKAGE (PLANNING)

<b>Applicant (Entity) Name:</b> GARBERVILLE SANITARY DISTRICT	
<b>Project Title:</b> MEADOWS AERIAL WATERLINE RECONSTRUCTION PROJECT	
<b>Contact Person:</b> JENNIE SHORT	<b>Phone:</b> (707 ) 223-4567

## I. Technical Information

1. Describe the water system and its facilities. Include details relating to source, storage, treatment, and distribution system. Attach a schematic/map of the system which includes existing facilities (label as **Attachment T1**).

Attachment T1 provides a detailed overview of the infrastructure for:

- water sources
- water treatment
- water storage
- water transmission

2. Describe the problem being addressed by the planning project and attach supporting documents of the problem (label as **Attachment T2**).

The existing 6" aerial waterline over Bear Gulch transmits treated water from the main town of Garberville to the Meadows Subdivisions. It serves approximately one quarter of the GSD customers including the Cal FIRE station; Caltrans, Humboldt County Roads, and PG&E maintenance yards; and Renner fuel station. These are some of the critical customers during emergency conditions. Maintaining water service to these locations is crucial for the Garberville community.

The waterline in the slope of Bear Gulch has had numerous failures in the past 15 years. The slope is extremely steep and access to the waterline can only be made on foot or with very small equipment. On March 4, 2010 and again on December 28, 2010 the District experienced a catastrophic failure of the 6" line. As part of the 2010 failure, the District had the problem evaluated by David Lindberg, Certified Engineering Geologist. Mr. Lindberg described the problem and the landslide(s) that has occurred on the slope of Bear Gulch. Mr. Lindberg's letter states, "For the long term, however, the water supply to the District's northern customers would be more reliable if the water line crossing Bear Canyon could be abandoned and rerouted to a more stable and accessible location."

The planning project will evaluate the type and size of the replacement tank as well as perform the tasks associated with environmental, technical, and financial documentation.

3. Has an analysis of alternatives been completed? Make sure the analysis includes consolidation as an alternative.  
 YES (Attach a copy of the analysis and label as **Attachment T3**)  
 NO

4. Attach a Scope of the Project (label as **Attachment T4**).
5. Attach a signed Certification for Compliance with Water Metering (label as **Attachment T5a**).
6. Attach a schematic/map of the proposed facilities if available (label as **Attachment T6**).
7. Attach an Engineering Report if available (label as **Attachment T7**).
8. Attach a copy of the applicable professional engineering services contract if available (label as **Attachment T8**).

9. Proposed eligible start date (see instructions): January 2020
10. Estimated project expenditures incurred prior to executing a financing agreement, which the entity intends to claim for reimbursement: \$ 5,000

## II. WATER RIGHTS, WATER CONSERVATION AND URBAN WATER MANAGEMENT

### WATER RIGHTS

1. Describe the nature of the water rights applicable to your water source and attach water rights documentation related to water source (label as **Attachment T9**).

The District holds a water diversion permit from the State Water Resources Control Board for appropriation of water from the South Fork of the Eel River. The permit is number 20789. This permit allows the District to divert a maximum of 0.595 cubic feet per second (267 gpm) from the river, year round. The District also has a fixed license that allows the District to divert an additional 0.155 cfs. The total maximum instantaneous diversion allowed is 0.75 cfs (336 gpm). This would equate to a maximum daily diversion of approximately 484,700 gallons and 177 million gallons per year. Both documents were amended as of October 11, 2013.

### WATER DIVERSION REPORTING

2. Are you a water diverter in compliance with Water Code Section 5103?  
 YES  NO

For information see: [http://www.waterboards.ca.gov/waterrights/water\\_issues/programs/diversion\\_use/](http://www.waterboards.ca.gov/waterrights/water_issues/programs/diversion_use/)

### WATER CONSERVATION

3. If you are a retail water supplier, are you in compliance with the State Water Board's emergency drought regulations at Section 863-865 of title 23 of the California Code of Regulations?

YES  NO

4. Are you an urban water supplier as defined in Water Code Section 10608.12?

YES  NO

Urban water suppliers must submit one of the following:

- Water Conservation Program (label as Attachment **T10**)  
 Signed the Memorandum of Understanding regarding urban water conservation in California (label as Attachment **T11**)  
 Urban Water Management Plan per Water Code Section 10653 (label as Attachment **T12**).

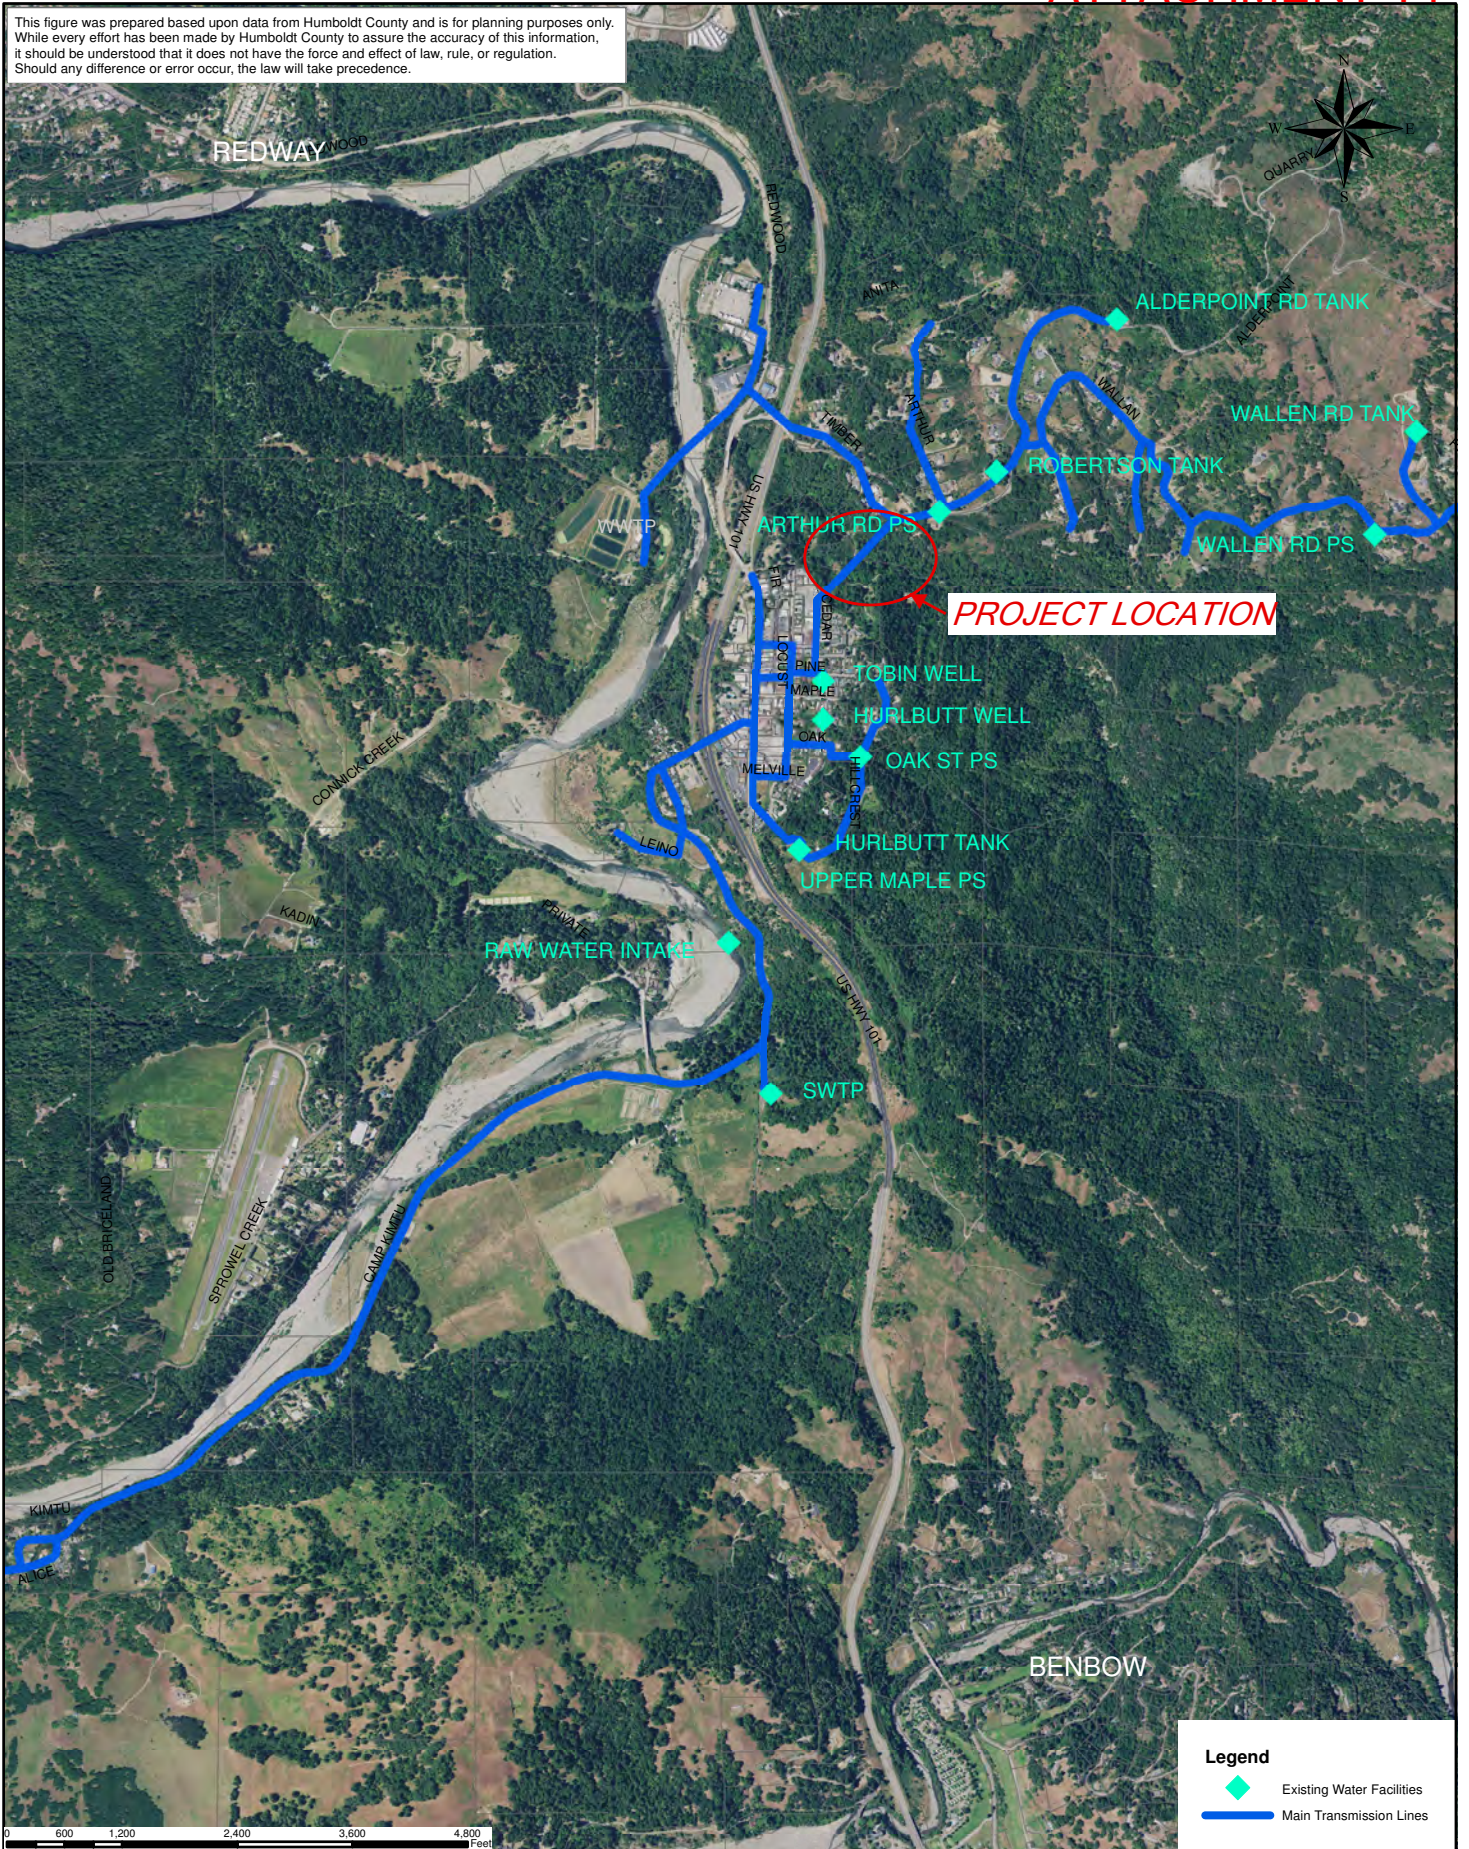

## ATTACHMENT CHECKLIST

Check the box next to each item attached to your application.

- T1 – Schematic/Map of System and Facilities
- T2 – Supporting Documents of the Problem
- T3 – Analysis of Alternatives (if applicable)
- T4 – Scope of the Project (see attached outline)
- T5a – Certification for Compliance with Water Metering Form
- T6 – Schematic/Map of the Proposed Facilities (if available)
- T7 – Engineering Report (if available)
- T8 – Contract for Professional Engineering Services (if available)
- T9 – Water Rights Documentation (if applicable)
- T10 – Water Conservation Program (if applicable)
- T11 – Memorandum of Understanding (if applicable)
- T12 – Urban Water Management Plan (if applicable)

This figure was prepared based upon data from Humboldt County and is for planning purposes only. While every effort has been made by Humboldt County to assure the accuracy of this information, it should be understood that it does not have the force and effect of law, rule, or regulation. **INFRASTRUCTURE OVERVIEW**  
 SCALE: 1:24,000  
 DRAWN BY: J. SHORT  
 DATE: 10/12/19

Exhibit  
**T1**

INFRASTRUCTURE OF WATER SOURCES

The South Fork of the Eel River Infiltration Gallery provides collection of the main water source. It was originally installed in 1940. The water flows through a collection chamber into a corrugated metal pipe that is 4 feet in diameter by 55 feet in high. There are two 25 HP submersible pumps that supply up to 350 GPM to the system. The pump discharges to a 6" raw water pipeline that transports the raw water to the new surface water treatment plant (SWTP) on Tooby Ranch Road.

Tobin Well is a groundwater source with a duplex pumping system with chlorination. From the January 25, 2013, report by SHN Engineers & Geologists entitled *Tobin Well Supplemental Project Report*, "The existing Tobin Well is located at 510 Pine Lane in Garberville, CA. The property is approximately 75 feet along Pine Lane and 150 feet deep. The well house is located along the front of the property with a storage building located at the rear of the property. The well is currently used to provide a backup water supply to the district during high turbidity events in the Eel River. The existing well produces approximately 45 GPM providing approximately 65,000 gallons per day. The well is housed in a 12-foot x 15-foot pump house. The existing pressure tank is functional but shows heavy signs of corrosion. The well is a 5 foot diameter well approximately 45 feet in depth with a concrete landing approximately 24 feet below the existing ground surface. The concrete landing has a 24 inch square access hatch. It appears the well draws water from an unconfined aquifer. Disinfection is provided through a chlorine drip into the well to provide a .5 to 1.0 mg/1 dose of sodium hypochlorite. The District's operations staff has conducted drawdown tests with the existing 45 gpm pump. After 12 hours of continuous pumping, the well stabilized at a depth of 36.4 with a drawdown of approximately 6 feet. The well reached a 95 percent recovery five hours after the pumps were turned off."

In 2014 the District installed duplex variable speed pumps sized to pump up to 100 gallons per minute (gpm) with level control. The specifics on the pumps are: Goulds model 95L07, 6" diameter, 5-stage submersible pump rated approximately 100 GPM @ 173' TDH, driven by a 7.5 HP, 3/60/230 volt motor. Pump has a 3" NPT discharge. The pumps can be controlled by the water level in the well and can vary the pump's output to maintain a preset water surface. The controller is a Goulds model CPC20311 Aquavar variable speed controller, 30.8 amp output with a Goulds model 9K396 submersible pressure transducer, 7.5 PSI with 100' cable. Most times this automation is not used since the cycle times for automated pumping are too short.

The existing system has adequate production, treatment, and storage capacities for the average peak daily demand. The maximum daily demand is 427,780 gpd recorded during the month of July in 1999. The total storage capacity for the system is approximately 500,000 gallons which is the sum of the four storage tanks in the system. This is sufficient to meet the average dry day water demand. The water treatment facility produces water that meets or exceeds the State regulations for drinking water and the Surface Water Treatment Regulations. The turbidity and residual free chlorine levels comply with the maximum allowable levels. The existing system provides four pressure zones with adequate pressure throughout the District.

## **INFRASTRUCTURE OF WATER TREATMENT**

The SWTP consists of flocculation, direct filtration, chlorination, and finished water pumping system. The water treatment plant utilizes Catfloc L Polymer as a coagulant and filter aid. The polymer is injected into the raw water line prior to entering the flocculation basin located upstream of the filters. The baffled flocculation tank is 5,500 gallons, 8 feet in diameter and 14 feet straight shell length, 150 psi pressure tank.

The filtration system is a duplex Loprest model and generally consists of two 108" diameter x 72" straight shell length, 150 psi pressure tanks with 18" filter sand and 12" anthracite with two grades media support gravel and associated piping, valves, controls, and accessories. The filtrations system requires occasional backwash of the filter medium. The spent backwash water is stored in a 35,000 gallon, 18 feet diameter by 18 feet side water depth with overall height of 22 feet, steel welded storage tank. The clearwater from the backwash storage tank will be recycled back into the treatment plant system and the sediment will periodically be pumped from the tank and disposed of by the pumping company. The backwash recycling pump allows the clearwater from the storage tank to be pumped back into the treatment plant.

The water is chlorinated using liquid sodium hypochlorite. The liquid sodium hypochlorite can be injected prior to flocculation and after the water has been filtered. After the sodium hypochlorite is injected, the chlorination detention time must be satisfied prior to the water being used. Originally the SWTP was constructed with an underground chlorine contact chamber of 30" serpentine pipe. That pipe failed in Nov. 2017 and had to be replaced. The construction of an above ground steel baffled pressure vessel was completed in 2018 to replace the underground chamber.

The finished water is pumped up Sprowel Creek Road, through town, and to the existing main storage tank on APN 032-211-012. These pumps are a duplex pumping system. The SWTP has a permanently mounted, diesel, 60 kW generator with a tank that will allow for 72 hours of continuous operation. This generator can power the entire SWTP facility during power outages.

## **INFRASTRUCTURE FOR WATER STORAGE**

The District has four finished water storage tanks:

- Main Hurlbutt Tank - partially in-ground concrete tank - 180,000 gallon
- Alderpoint Road Tank - welded steel tank - 250,000 gallon
- Robertson Tank - partially in-ground concrete tank - 50,000 gallon
- Wallen Road Tank - redwood tank - 20,000 gallon

## **INFRASTRUCTURE FOR WATER TRANSMISSION**

The District has miles of 2", 4", 6" and 8" waterline that transmits the water from the SWTP to the various tanks and to the various pressure zones. An overview of the main transmission lines is shown on Figure T1. There are also distribution lines to all of the customers.

# ATTACHMENT T2

## Attachment T2 – Supporting Documents for the Meadows Aerial Waterline Reconstruction Project Garberville Sanitary District

The existing 6" aerial waterline over Bear Gulch transmits treated water from the main town of Garberville to the Meadows Subdivisions. It serves approximately one quarter of the GSD customers including the Cal FIRE station, Caltrans maintenance yard, Humboldt County Road Maintenance yard, PG&E maintenance yard, and Renner fuel station. These are some of the critical customers during emergency conditions. Maintaining water service to these locations is crucial for the Garberville community.

The waterline in the slope of Bear Gulch has had numerous failures in the past 15 years. The slope is extremely steep and access to the waterline can only be made on foot or with very small equipment. In 2008 the line broke and had to be repaired by downsizing the section repaired to a 3" flexible poly pipe to accommodate the moving slope. The waterline ruptured in both March and December of 2010. The failure was caused by a 10 acre landside in the remote canyon that divides the northern portion of the District with the southern portion of downtown.

In 2010 when the waterline most recently broke, the Cal FIRE personnel assisted the District in manually transporting the section of 4" waterline and couplers to the broken site and clearing the brush for a temporary realignment to get the waterline away from the moving slope. A portion of the repair had to be completed aboveground instead of trenching and installing the connecting pieces. The surrounding ground is slipping down the gulch.

As part of the March 2010 failure, the District had the problem evaluated by David Lindberg, Certified Engineering Geologist of LACO Assocaites. The letter from Mr. Lindberg is attached and provides an overall summary of the conditions at the site and possible solutions. Mr. Lindberg states in part *"Relocation of the pipeline to more-stable ground southeast of the existing landslide will serve to protect the pipeline for the short term. Because the valley slopes of Bear Canyon are steep and subject to landsliding, we recommend the District consider relocating the pipeline to an area with greater long-term stability. Relocating the pipeline onto the (Bear Gulch) freeway bridge would be a long-term solution to the problem of instability in Bear Canyon."*

The County of Humboldt constructed a bridge over Bear Gulch in Redwood Drive.

This bridge was designed to accommodate rerouting the District's waterline through this bridge structure.

Various photos of the temporary reroute around the landslide area and the connections downsizing the line from 6" to 4" and 3",

Connection of aerial waterline to trees @ each side of gulch

6244.03

Dear Mr. Bryant:

In response to your request, an Engineering Geologist from LACO Associates (LACO) met with you on Monday March 8<sup>th</sup>, to perform a reconnaissance-level geologic observation of a landslide that damaged your 8-inch transite waterline. We examined this site to provide you with geologic information to help you decide how to deal with the problem of your compromised water line. No soil sampling, geologic mapping, or materials testing was part of our scope of work. The landslide occurred recently on the north edge of downtown Garberville on the southerly side of Bear Canyon. The head of the landslide is below the power company's transformer yard, and northwesterly of the Garberville Library and the office of Humboldt County Supervisor Clendenen. Although we are aware of no eyewitness accounts, it is plausible that this landslide could have been initiated by the ground shaking associated with the M 6.5 earthquake of January 9, 2010.

We noted that runoff from the power company's transformer yard, and other hardscaped areas nearby, discharges just above the headscarp area of the landslide. Despite the fact that this situation has existed for years, the addition of water to a steep slope is known to be a destabilizing factor. Additional investigation of the storm water discharge into the active landslide by the parties responsible for the discharge would be prudent to avoid impacts to the waters of Bear Canyon Creek.

The waterline is located on the edge of the landslide. Movement resulted in a breakage of the waterline on the 4<sup>th</sup> of March. The break was repaired and the pipeline was in service at the time of our site visit. Approximately 30 feet of pipeline is presently exposed in the right lateral scarp (looking downhill) of the slide. The exposed pipe has little support from the remaining soils and is considered at risk of additional damage from further slide movement.

In general, options for mitigating the threat to your waterline include:

1. Stabilization of the slope,
2. Replace the existing transite pipeline with a pipeline that is flexible and can accommodate future movement,
3. Relocate the waterline away from the unstable slopes(s).

In our opinion, the landslide will continue to move, likely resulting in additional damage to the waterline. To minimize the risk of future breakage, we recommend that the pipeline be relocated onto more stable ground. Based on our site reconnaissance, it appears that more stable ground is located easterly of the landslide. We recommend that additional geomorphic mapping of the site and vicinity be performed to determine and delineate areas of suitable stability to support relocation of the pipeline.

Relocation of the pipeline to the more-stable ground southeast of the existing landslide will serve to protect the pipeline for the short term. Because the valley slopes of Bear Canyon are steep and subject to landsliding, we recommend the District consider relocating the pipeline to an area with greater long-term stability. We understand that the pipeline could cross Bear Canyon on the 101 freeway bridge less than 1,000 feet northwest of where the pipeline presently crosses Bear Canyon. Relocating the pipeline onto the freeway bridge would be a long-term solution to the problem of slope instability in Bear Canyon.

Please contact me at 443-5054 if you have any questions.

Sincerely,  
LACO Associates

Subject: Bear Canyon Landslide

Dear Mr. Bryant:

On December 29, as you requested, Lindberg Geologic Consulting (LGC) performed a brief field reconnaissance of the water line route adjacent to the landslide in Bear Canyon. Bear Canyon cuts from southeast to northwest across Garberville and flows into the Eel River northwest of town. The landslide is on the south side of the canyon and appears to begin below a transformer yard near the Garberville library. This landslide recently moved, expanded, and ruptured the District's water line for the second time in about nine months. To date, only the eastern side of the landslide and the developed part of Garberville directly above have been observed. The landslide is developed in ancestral Eel River terrace deposits consisting of gravelly alluvium.

The head of the landslide could not be observed, but appears to be located upslope and west of the area where the water line ruptured. Thick brush prevents direct observation of the head of this landslide from the area where the water line broke. The landslide was estimated to be about 400 feet in length and the toe of the slide has reached the creek at the bottom of the canyon. This landslide was described previously (LACO Associates, 2010, copy attached). The water line crosses the creek approximately 100 feet upstream of the easterly lateral scarp of the landslide. The creek crossing itself does not appear to be threatened by the slide at the present time.

The water line crossing Bear Canyon serves the District's customers on the north side of the canyon, including a CalFire's fire station. On March 4, 2010, as a result of heavy rains, and possibly the ground shaking associated with the Eureka earthquake of January 9, the landslide moved and ruptured the water line. Where the water line crosses Bear Canyon the terrain is steep and brushy and the water line route is accessible only on foot.

Since the water line ruptured in March 2010, the District relocated it some distance to the east in a shallow trench. During the heavy rains of December, the landslide was reactivated. Renewed movement and subsequent eastward expansion of the landslide resulted in another rupture of the water line at its new location. It is recommended that the water line be relocated temporarily to the east as far as feasible. A CalFire hand crew has cleared some of the brush from an area that appears suitably stable for temporarily rerouting the water line. For the long term, however, the water supply to the District's northern customers would be more reliable if the water line crossing Bear Canyon could be abandoned and rerouted to a more stable and accessible location.

This landslide is potentially hazardous to the properties above it. It might be stabilized if measures were taken promptly to redirect the runoff presently being discharged onto the above the head of the slide. Storm water runoff, presently discharging in the vicinity of the corner of the

electrical transformer yard, may be the most-significant factor contributing to this landslide. The source and volume of the storm water runoff discharged was not investigated in this brief reconnaissance, but erosion was observed at the outlet of these storm drain pipes. This runoff contributes to instability by eroding and over-steepening slopes, and by saturating the soil. Prompt redirection of the runoff to an appropriate outlet point where no erosion will occur is strongly recommended if the future extents of this landslide are to be limited. With the runoff water redirected, the landslide may become less active and hazardous. Additional stabilization of this landslide may also be accomplished by protecting the toe of the slide from erosion by the creek.

It was noted that the toe of the landslide had dammed the creek and redirected its flow against the north bank. This creates a potential for erosion to destabilize the slopes opposite the landslide. Also, as the stream cuts down through the toe of the landslide, it can entrain sediment and debris which could threaten downstream culverts, especially if debris in the toe is mobilized during a high-discharge storm event.

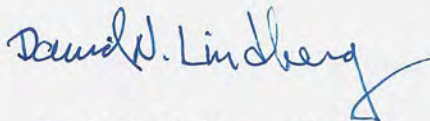

East of the landslide, near the top of the canyon slope, a plastic pipe draining storm water runoff from a nearby senior housing facility was observed. The area where the pipe discharges appears to have been adequately protected from erosion. Most of the water from this drain pipe outlet flows in a northeasterly direction, away from the landslide. It appeared, however, that during especially high discharges, some runoff may overflow northwesterly toward the landslide. It is recommended that this pipe outlet be adjusted as necessary to ensure that all of the discharge is positively directed away from the landslide mass.

In summary, it appears that storm water discharge and erosion has resulted in a landslide which has twice ruptured the District's water line this year. The area recently cleared for a replacement water line pipe route some distance easterly of the existing route appears suitably stable as a temporary location for a new section of water line. If no measures are taken to contain, control and redirect the concentrated runoff presently being directed onto the slope at the head of the landslide, then nearby facilities like the water line will continue to be at risk. To improve the long-term reliability of the water supply to the District's customers north of Bear Canyon, it is recommended that the current water line be abandoned and the water supply for these customers be rerouted via more-stable ground.

Please contact me at 442-6000 if you have any concerns or questions.

Thank you,

Sincerely,

David N. Lindberg, CEG 1895  
Lindberg Geologic Consulting

**STATE OF CALIFORNIA  
CALIFORNIA ENVIRONMENTAL PROTECTION AGENCY  
STATE WATER RESOURCES CONTROL BOARD**

**DIVISION OF WATER RIGHTS**

**RIGHT TO DIVERT AND USE WATER**

APPLICATION 9686

PERMIT 5487

LICENSE 3404

Right Holder: Garberville Sanitary District  
P.O. Box 211  
Garberville, CA 95542

The State Water Resources Control Board (State Water Board) authorizes the diversion and use of water by the right holder in accordance with the limitations and conditions herein SUBJECT TO PRIOR RIGHTS. The priority of this right dates from **July 31, 1939**. This right is issued in accordance with the State Water Board delegation of authority to the Deputy Director for Water Rights (Resolution 2012-0029) and the Deputy Director for Water Rights redelegation of authority dated July 6, 2012. This right supersedes any previously issued right on **Application 9686**. The right holder has made proof, to the satisfaction of the State Water Board, of the quantities of water put to beneficial use during the authorized development schedule.

The Deputy Director for Water Rights finds that: (a) the change will not operate to the injury of any lawful user of water; (b) good cause has been shown for the change; (c) the petition does not constitute the initiation of a new right; and (d) the State Water Resources Control Board (State Water Board) has made the required findings pursuant to the California Environmental Quality Act (CEQA) or the project is exempt from CEQA.

The State Water Board has complied with its independent obligation to consider the effect of the proposed change on public trust resources and to protect those resources where feasible. (*National Audubon Society v. Superior Court* (1983) 33 Cal.3d 419 [189 Cal.Rptr. 346, 658 P.2d 709].)

**Right holder is hereby granted a right to divert and use water as follows:**

1. Source of water: **(1) South Fork Eel River**  
tributary to: **(1) Eel River thence the Pacific Ocean**  
within the County of **Humboldt**.

2. Location of point of diversion

3. Purpose of use	4. Place of use					
	40-acre subdivision of public land survey or projection thereof	Section (Projected)*	Township	Range	Base and Meridian	Acres
<b>Municipal</b>	<b>Within the Garberville Sanitary District service area boundary within Sections 13, 23, 24, 25 and 35, T4S, R3E, HB&amp;M; and Sections 18, 19, and 20, T4S, R4E, HB&amp;M; as shown on map.</b>					

The place of use is shown on map dated September 9, 2013 on file with the State Water Board.

5. The water appropriated under this right shall be limited to the quantity which can be beneficially used and shall not exceed **0.155 cubic foot per second** by direct diversion to be diverted from January 1 to December 31 of each year. The maximum amount diverted under this right shall not exceed **112.2 acre-feet per year**.  
(0000005A)
6. The total quantity of water diverted under this right and the right pursuant to Application 29981 shall not exceed **542.2 acre-feet per year**.  
(0000005Q)
7. The maximum simultaneous rate of diversion under this right and the right pursuant to Application 29981 shall not exceed **0.75 cubic foot per second**.  
(0000005S)
8. Based on the information in the Division's files, water has not been used under a claimed existing right on the place of use. If right holder exercises a claimed existing right on the place of use authorized by this right without prior approval from the State Water Board, right holder shall forfeit this water right.  
(0000021C)
9. The equivalent of the authorized continuous flow allowance for any 7-day period may be diverted in a shorter time, provided there is no interference with other water rights and instream beneficial uses, and provided further that all terms and conditions protecting instream beneficial uses are observed.  
(0000027)
10. No water shall be directly diverted under this right unless right holder is monitoring and reporting said diversion of water. This monitoring shall be conducted using a device and methods satisfactory to the Deputy Director for Water Rights. The device shall be capable of monitoring the rate and quantity of water diverted and shall be properly maintained.

Right holder shall provide the Division of Water Rights with evidence that the device has been installed with the first annual report submitted after device installation. Right holder shall provide the Division of Water Rights with evidence that substantiates that the device is functioning properly every five years after device installation as an enclosure to the current annual report or whenever requested by the Division of Water Rights.

Right holder shall maintain a record of all diversions under this license that includes the date, time, rate of diversion, and the amount of water diverted. The records shall be submitted with the annual report or whenever requested by the Division of Water Rights.

(000000R)

**THIS RIGHT IS ALSO SUBJECT TO THE FOLLOWING TERMS AND CONDITIONS:**

- A. Right holder is on notice that: (1) failure to timely commence or complete construction work or beneficial use of water with due diligence, (2) cessation or partial cessation of beneficial use of water, or (3) failure to observe any of the terms or conditions of this right, may be cause for the State Water Board to consider revocation (including partial revocation) of this right. (Cal. Code Regs., tit. 23, § 850.) (0000016)
- B. Right holder is on notice that when the State Water Board determines that any person is violating, or threatening to violate, any term or condition of a right, the State Water Board may issue an order to that person to cease and desist from that violation. (Wat. Code, § 1831.) (0000017)
- C. Right holder is not authorized to make any modifications to the location of diversion facilities, place of use or purposes of use, or make other changes to the project that do not conform with the terms and conditions of this right, prior to submitting a change petition and obtaining approval of the State Water Board. (0000018)
- D. Right holder shall maintain records of the amount of water diverted and used under this right to enable the State Water Board to determine the amount of water that has been applied to beneficial use. (0000015)
- E. Right holder shall promptly submit any reports, data, or other information that may reasonably be required by the State Water Board, including but not limited to documentation of water diversion and use under this right and documentation of compliance with the terms and conditions of this right. (0000010)
- F. No water shall be diverted under this right unless right holder is operating in accordance with a compliance plan, satisfactory to the Deputy Director for Water Rights. Said compliance plan shall specify how right holder will comply with the terms and conditions of this right. Right holder shall comply with all reporting requirements in accordance with the schedule contained in the compliance plan. (0000070)
- G. Right holder shall grant, or secure authorization through right holder's right of access to property owned by another party, the staff of the State Water Board, and any other authorized representatives of the State Water Board the following:
1. Entry upon property where water is being diverted, stored or used under a right issued by the State Water Board or where monitoring, samples and/or records must be collected under the conditions of this right;
  2. Access to copy any records at reasonable times that are kept under the terms and conditions of a right or other order issued by State Water Board;
  3. Access to inspect at reasonable times any project covered by a right issued by the State Water Board, equipment (including monitoring and control equipment), practices, or operations regulated by or required under this right; and,
  4. Access to photograph, sample, measure, and monitor at reasonable times for the purpose of ensuring compliance with a right or other order issued by State Water Board, or as otherwise authorized by the Water Code. (0000011)

- H. This right shall not be construed as conferring right of access to any lands or facilities not owned by right holder. (0000022)
- I. All rights are issued subject to available flows. Inasmuch as the source contains treated wastewater, imported water from another stream system, or return flow from other projects, there is no guarantee that such supply will continue. (0000025)
- J. This right does not authorize diversion of water dedicated by other right holders under a senior right for purposes of preserving or enhancing wetlands, habitat, fish and wildlife resources, or recreation in, or on, the water. (Wat. Code, § 1707.) The Division of Water Rights maintains information about these dedications. It is right holders' responsibility to be aware of any dedications that may preclude diversion under this right. (0000212)
- K. No water shall be diverted or used under this right, and no construction related to such diversion shall commence, unless right holder has obtained and is in compliance with all necessary permits or other approvals required by other agencies. If an amended right is issued, no new facilities shall be utilized, nor shall the amount of water diverted or used increase beyond the maximum amount diverted or used during the previously authorized development schedule, unless right holder has obtained and is in compliance with all necessary requirements, including but not limited to the permits and approvals listed in this term.
- Within 90 days of the issuance of this right or any subsequent amendment, right holder shall prepare and submit to the Division of Water Rights a list of, or provide information that shows proof of attempts to solicit information regarding the need for, permits or approvals that may be required for the project. At a minimum, right holder shall provide a list or other information pertaining to whether any of the following permits or approvals are required: (1) lake or streambed alteration agreement with the Department of Fish and Wildlife (Fish & G. Code, § 1600 et seq.); (2) Department of Water Resources, Division of Safety of Dams approval (Wat. Code, § 6002); (3) Regional Water Quality Control Board Waste Discharge Requirements (Wat. Code, § 13260 et seq.); (4) U.S. Army Corps of Engineers Clean Water Act section 404 permit (33 U.S.C. § 1344); and (5) local grading permits.
- Right holder shall, within 30 days of issuance of any permits, approvals or waivers, transmit copies to the Division of Water Rights. (0000203)
- L. Urban water suppliers must comply with the Urban Water Management Planning Act (Wat. Code, § 10610 et seq.). An "urban water supplier" means a supplier, either publicly or privately owned, providing water for municipal purposes either directly or indirectly to more than 3,000 customers or supplying more than 3,000 acre-feet of water annually.
- Agricultural water users and suppliers must comply with the Agricultural Water Management Planning Act (Act) (Water Code, § 10800 et seq.). Agricultural water users applying for a permit from the State Water Board are required to develop and implement water conservation plans in accordance with the Act. An "agricultural water supplier" means a supplier, either publicly or privately owned, supplying more than 50,000 acre-feet of water annually for agricultural purposes. An agricultural water supplier includes a supplier or contractor for water, regardless of the basis of right, which distributes or sells for ultimate resale to customers. (0000029D)

- M. Pursuant to Water Code sections 100 and 275 and the common law public trust doctrine, all rights and privileges under this right, including method of diversion, method of use, and quantity of water diverted, are subject to the continuing authority of the State Water Board in accordance with law and in the interest of the public welfare to protect public trust uses and to prevent waste, unreasonable use, unreasonable method of use, or unreasonable method of diversion of said water.

The continuing authority of the State Water Board may be exercised by imposing specific requirements over and above those contained in this right with a view to eliminating waste of water and to meeting the reasonable water requirements of right holder without unreasonable draft on the source. Right holder may be required to implement a water conservation plan, features of which may include but not necessarily be limited to (1) reusing or reclaiming the water allocated; (2) using water reclaimed by another entity instead of all or part of the water allocated; (3) restricting diversions so as to eliminate agricultural tailwater or to reduce return flow; (4) suppressing evaporation losses from water surfaces; (5) controlling phreatophytic growth; and (6) installing, maintaining, and operating efficient water measuring devices to assure compliance with the quantity limitations of this right and to determine accurately water use as against reasonable water requirements for the authorized project. No action will be taken pursuant to this paragraph unless the State Water Board determines, after notice to affected parties and opportunity for hearing, that such specific requirements are physically and financially feasible and are appropriate to the particular situation.

The continuing authority of the State Water Board also may be exercised by imposing further limitations on the diversion and use of water by right holder in order to protect public trust uses. No action will be taken pursuant to this paragraph unless the State Water Board determines, after notice to affected parties and opportunity for hearing, that such action is consistent with California Constitution, article X, section 2; is consistent with the public interest; and is necessary to preserve or restore the uses protected by the public trust.

(0000012)

- N. The quantity of water diverted under this right is subject to modification by the State Water Board if, after notice to right holder and an opportunity for hearing, the State Water Board finds that such modification is necessary to meet water quality objectives in water quality control plans which have been or hereafter may be established or modified pursuant to Division 7 of the Water Code. No action will be taken pursuant to this paragraph unless the State Water Board finds that (1) adequate waste discharge requirements have been prescribed and are in effect with respect to all waste discharges which have any substantial effect upon water quality in the area involved, and (2) the water quality objectives cannot be achieved solely through the control of waste discharges.

(0000013)

- O. This right does not authorize any act which results in the taking of a candidate, threatened or endangered species or any act which is now prohibited, or becomes prohibited in the future, under either the California Endangered Species Act (Fish & G. Code, § 2050 et seq.) or the federal Endangered Species Act (16 U.S.C. § 1531 et seq.). If a "take" will result from any act authorized under this right, right holder shall obtain any required authorization for an incidental take prior to construction or operation of the project. Right holder shall be responsible for meeting all requirements of the applicable Endangered Species Act for the project authorized under this right.

(0000014)

---

*This right is issued and right holder takes it subject to the following provisions of the Water Code:*

*Section 1627. A license shall be effective for such time as the water actually appropriated under it is used for a useful and beneficial purpose in conformity with this division (of the Water Code) but no longer.*

*Section 1629. Every licensee, if he accepts a license, does so under the conditions precedent that no value whatsoever in excess of the actual amount paid to the State therefore shall at any time be assigned to or claimed for any license granted or issued under the provisions of this division (of the Water Code), or for any rights granted or acquired under the provisions of this division (of the Water Code), in respect to the regulation by any competent public authority of the services or the price of the services to be rendered by any licensee or by the holder of any rights granted or acquired under the provisions of this division (of the Water Code) or in respect to any valuation for purposes of sale to or purchase, whether through condemnation proceedings or otherwise, by the State or any city, city and county, municipal water district, irrigation district, lighting district, or any political subdivision of the State, of the rights and property of any licensee, or the possessor of any rights granted, issued, or acquired under the provisions of this division (of the Water Code).*

*Section 1630. At any time after the expiration of twenty years after the granting of a license, the State or any city, city and county, municipal water district, irrigation district, lighting district, or any political subdivision of the State shall have the right to purchase the works and property occupied and used under the license and the works built or constructed for the enjoyment of the rights granted under the license.*

*Section 1631. In the event that the State, or any city, city and county, municipal water district, irrigation district, lighting district, or political subdivision of the State so desiring to purchase and the owner of the works and property cannot agree upon the purchase price, the price shall be determined in such manner as is now or may hereafter be provided by law for determining the value of property taken in eminent domain proceedings.*

STATE WATER RESOURCES CONTROL BOARD

ORIGINAL SIGNED BY:  
KATHERINE MROWKA, ACTING MANAGER FOR

*Barbara Evoy, Deputy Director  
Division of Water Rights*

Dated: OCT 11 2013

STATE OF CALIFORNIA  
 CALIFORNIA ENVIRONMENTAL PROTECTION AGENCY  
 STATE WATER RESOURCES CONTROL BOARD

DIVISION OF WATER RIGHTS

RIGHT TO DIVERT AND USE WATER

APPLICATION 29981

PERMIT 20789

Right Holder: Garberville Sanitary District  
 P.O. Box 211  
 Garberville, CA 95542

The State Water Resources Control Board (State Water Board) authorizes the diversion and use of water by the right holder in accordance with the limitations and conditions herein SUBJECT TO PRIOR RIGHTS. The priority of this right dates from **July 22, 1991**. This right is issued in accordance with the State Water Board delegation of authority to the Deputy Director for Water Rights (Resolution 2012-0029) and the Deputy Director for Water Rights redelegation of authority dated July 6, 2012. This right supersedes any previously issued right on **Application 29981**.

The Deputy Director for Water Rights finds that: (a) the change will not operate to the injury of any lawful user of water; (b) good cause has been shown for the change; (c) the petition does not constitute the initiation of a new right; and (d) the State Water Resources Control Board (State Water Board) has made the required findings pursuant to the California Environmental Quality Act (CEQA) or the project is exempt from CEQA.

The State Water Board has complied with its independent obligation to consider the effect of the proposed change on public trust resources and to protect those resources where feasible. (*National Audubon Society v. Superior Court* (1983) 33 Cal.3d 419 [189 Cal.Rptr. 346, 658 P.2d 709].)

**Right holder is hereby granted a right to divert and use water as follows:**

- Source of water: **(1) South Fork Eel River**  
 tributary to: **(1) Eel River thence the Pacific Ocean**  
 within the County of Humboldt.

2. Location of point of diversion

By California Coordinate System of 1983 in Zone 1	40-acre subdivision of public land survey or projection thereof	Section (Projected)*	Township	Range	Base and Meridian
<b>(1) North 1,922,330 feet and East 6,059,360 feet</b>	<b>SW ¼ of SE ¼</b>	<b>24</b>	<b>4S</b>	<b>3E</b>	<b>H</b>

3. Purpose of use	4. Place of use					
	40-acre subdivision of public land survey or projection thereof	Section (Projected)*	Township	Range	Base and Meridian	Acres
Municipal	<b>Within the Garberville Sanitary District service area boundary within Sections 13, 23, 24, 25 and 35, T4S, R3E, HB&amp;M; and Sections 18, 19, and 20, T4S, R4E, HB&amp;M; as shown on map.</b>					

The place of use is shown on map dated September 9, 2013 on file with the State Water Board.

5. The water appropriated under this right shall be limited to the quantity which can be beneficially used and shall not exceed **0.595 cubic foot per second** by direct diversion to be diverted from January 1 to December 31 of each year. The maximum amount diverted under this right shall not exceed **430 acre-feet per year.** (000005A)
6. The total quantity of water diverted under this right and the right pursuant to Application 9686 shall not exceed **542.2 acre-feet per year.** (000005Q)
7. The maximum simultaneous rate of diversion under this right and the right pursuant to Application 9686 shall not exceed **0.75 cubic foot per second.** (000005S)
8. Construction work and complete application of the water to the authorized use shall be prosecuted with reasonable diligence and completed by December 31, 1999. (000009)
9. Based on the information in the Division's files, water has not been used under a claimed existing right on the place of use. If right holder exercises a claimed existing right on the place of use authorized by this right without prior approval from the State Water Board, right holder shall forfeit this water right. (000021C)
10. The equivalent of the authorized continuous flow allowance for any 7-day period may be diverted in a shorter time, provided there is no interference with other water rights and instream beneficial uses, and provided further that all terms and conditions protecting instream beneficial uses are observed. (000027)
11. No water shall be directly diverted under this right unless right holder is monitoring and reporting said diversion of water. This monitoring shall be conducted using a device and methods satisfactory to the Deputy Director for Water Rights. The device shall be capable of monitoring the rate and quantity of water diverted and shall be properly maintained.  
 Right holder shall provide the Division of Water Rights with evidence that the device has been installed with the first annual report submitted after device installation. Right holder shall provide the Division of Water Rights with evidence that substantiates that the device is functioning properly every five years after device installation as an enclosure to the current annual report or whenever requested by the Division of Water Rights.  
 Right holder shall maintain a record of all diversions under this license that includes the date, time, rate of diversion, and the amount of water diverted. The records shall be submitted with the annual report or whenever requested by the Division of Water Rights. (000000R)

**THIS RIGHT IS ALSO SUBJECT TO THE FOLLOWING TERMS AND CONDITIONS:**

- A. Right holder is on notice that: (1) failure to timely commence or complete construction work or beneficial use of water with due diligence, (2) cessation or partial cessation of beneficial use of water, or (3) failure to observe any of the terms or conditions of this right, may be cause for the State Water Board to consider revocation (including partial revocation) of this right. (Cal. Code Regs., tit. 23, § 850.) (0000016)
- B. Right holder is on notice that when the State Water Board determines that any person is violating, or threatening to violate, any term or condition of a right, the State Water Board may issue an order to that person to cease and desist from that violation. (Wat. Code, § 1831.) (0000017)
- C. Right holder is not authorized to make any modifications to the location of diversion facilities, place of use or purposes of use, or make other changes to the project that do not conform with the terms and conditions of this right, prior to submitting a change petition and obtaining approval of the State Water Board. (0000018)
- D. Once the time to develop beneficial use of water ends under this permit, right holder is not authorized to increase diversions beyond the maximum annual amount diverted or used during the authorized development schedule prior to submitting a time extension petition and obtaining approval of the State Water Board. (0000019)
- E. The amount of water for consideration when issuing a license shall be limited to only the amount of water diverted and applied to beneficial use in compliance with the terms and conditions of this right, as determined by the State Water Board. (Wat. Code, § 1610.) (0000006)
- F. Right holder shall maintain records of the amount of water diverted and used under this right to enable the State Water Board to determine the amount of water that has been applied to beneficial use. (0000015)
- G. Right holder shall promptly submit any reports, data, or other information that may reasonably be required by the State Water Board, including but not limited to documentation of water diversion and use under this right and documentation of compliance with the terms and conditions of this right. (0000010)
- H. No water shall be diverted under this right unless right holder is operating in accordance with a compliance plan, satisfactory to the Deputy Director for Water Rights. Said compliance plan shall specify how right holder will comply with the terms and conditions of this right. Right holder shall comply with all reporting requirements in accordance with the schedule contained in the compliance plan. (0000070)
- I. Right holder shall grant, or secure authorization through right holder's right of access to property owned by another party, the staff of the State Water Board, and any other authorized representatives of the State Water Board the following:
1. Entry upon property where water is being diverted, stored or used under a right issued by the State Water Board or where monitoring, samples and/or records must be collected under the conditions of this right;

2. Access to copy any records at reasonable times that are kept under the terms and conditions of a right or other order issued by State Water Board;
3. Access to inspect at reasonable times any project covered by a right issued by the State Water Board, equipment (including monitoring and control equipment), practices, or operations regulated by or required under this right; and,
4. Access to photograph, sample, measure, and monitor at reasonable times for the purpose of ensuring compliance with a right or other order issued by State Water Board, or as otherwise authorized by the Water Code. (0000011)

J. This right shall not be construed as conferring right of access to any lands or facilities not owned by right holder. (0000022)

K. All rights are issued subject to available flows. Inasmuch as the source contains treated wastewater, imported water from another stream system, or return flow from other projects, there is no guarantee that such supply will continue. (0000025)

L. This right does not authorize diversion of water dedicated by other right holders under a senior right for purposes of preserving or enhancing wetlands, habitat, fish and wildlife resources, or recreation in, or on, the water. (Wat. Code, § 1707.) The Division of Water Rights maintains information about these dedications. It is right holders' responsibility to be aware of any dedications that may preclude diversion under this right. (0000212)

M. No water shall be diverted or used under this right, and no construction related to such diversion shall commence, unless right holder has obtained and is in compliance with all necessary permits or other approvals required by other agencies. If an amended right is issued, no new facilities shall be utilized, nor shall the amount of water diverted or used increase beyond the maximum amount diverted or used during the previously authorized development schedule, unless right holder has obtained and is in compliance with all necessary requirements, including but not limited to the permits and approvals listed in this term.

Within 90 days of the issuance of this right or any subsequent amendment, right holder shall prepare and submit to the Division of Water Rights a list of, or provide information that shows proof of attempts to solicit information regarding the need for, permits or approvals that may be required for the project. At a minimum, right holder shall provide a list or other information pertaining to whether any of the following permits or approvals are required: (1) lake or streambed alteration agreement with the Department of Fish and Wildlife (Fish & G. Code, § 1600 et seq.); (2) Department of Water Resources, Division of Safety of Dams approval (Wat. Code, § 6002); (3) Regional Water Quality Control Board Waste Discharge Requirements (Wat. Code, § 13260 et seq.); (4) U.S. Army Corps of Engineers Clean Water Act section 404 permit (33 U.S.C. § 1344); and (5) local grading permits.

Right holder shall, within 30 days of issuance of any permits, approvals or waivers, transmit copies to the Division of Water Rights. (0000203)

- N. Urban water suppliers must comply with the Urban Water Management Planning Act (Wat. Code, § 10610 et seq.). An "urban water supplier" means a supplier, either publicly or privately owned, providing water for municipal purposes either directly or indirectly to more than 3,000 customers or supplying more than 3,000 acre-feet of water annually.

Agricultural water users and suppliers must comply with the Agricultural Water Management Planning Act (Act) (Water Code, § 10800 et seq.). Agricultural water users applying for a permit from the State Water Board are required to develop and implement water conservation plans in accordance with the Act. An "agricultural water supplier" means a supplier, either publicly or privately owned, supplying more than 50,000 acre-feet of water annually for agricultural purposes. An agricultural water supplier includes a supplier or contractor for water, regardless of the basis of right, which distributes or sells for ultimate resale to customers.

(0000029D)

- O. Pursuant to Water Code sections 100 and 275 and the common law public trust doctrine, all rights and privileges under this right, including method of diversion, method of use, and quantity of water diverted, are subject to the continuing authority of the State Water Board in accordance with law and in the interest of the public welfare to protect public trust uses and to prevent waste, unreasonable use, unreasonable method of use, or unreasonable method of diversion of said water.

The continuing authority of the State Water Board may be exercised by imposing specific requirements over and above those contained in this right with a view to eliminating waste of water and to meeting the reasonable water requirements of right holder without unreasonable draft on the source. Right holder may be required to implement a water conservation plan, features of which may include but not necessarily be limited to (1) reusing or reclaiming the water allocated; (2) using water reclaimed by another entity instead of all or part of the water allocated; (3) restricting diversions so as to eliminate agricultural tailwater or to reduce return flow; (4) suppressing evaporation losses from water surfaces; (5) controlling phreatophytic growth; and (6) installing, maintaining, and operating efficient water measuring devices to assure compliance with the quantity limitations of this right and to determine accurately water use as against reasonable water requirements for the authorized project. No action will be taken pursuant to this paragraph unless the State Water Board determines, after notice to affected parties and opportunity for hearing, that such specific requirements are physically and financially feasible and are appropriate to the particular situation.

The continuing authority of the State Water Board also may be exercised by imposing further limitations on the diversion and use of water by right holder in order to protect public trust uses. No action will be taken pursuant to this paragraph unless the State Water Board determines, after notice to affected parties and opportunity for hearing, that such action is consistent with California Constitution, article X, section 2; is consistent with the public interest; and is necessary to preserve or restore the uses protected by the public trust.

(0000012)

- P. The quantity of water diverted under this right is subject to modification by the State Water Board if, after notice to right holder and an opportunity for hearing, the State Water Board finds that such modification is necessary to meet water quality objectives in water quality control plans which have been or hereafter may be established or modified pursuant to Division 7 of the Water Code. No action will be taken pursuant to this paragraph unless the State Water Board finds that (1) adequate waste discharge requirements have been prescribed and are in effect with respect to all waste discharges which have any substantial effect upon water quality in the area involved, and (2) the water quality objectives cannot be achieved solely through the control of waste discharges.

(0000013)

- Q. This right does not authorize any act which results in the taking of a candidate, threatened or endangered species or any act which is now prohibited, or becomes prohibited in the future, under either the California Endangered Species Act (Fish & G. Code, § 2050 et seq.) or the federal Endangered Species Act (16 U.S.C. § 1531 et seq.). If a "take" will result from any act authorized under this right, right holder shall obtain any required authorization for an incidental take prior to construction or operation of the project. Right holder shall be responsible for meeting all requirements of the applicable Endangered Species Act for the project authorized under this right.

(0000014)

---

*This right is issued and right holder takes it subject to the following provisions of the Water Code:*

*Section 1390. A permit shall be effective for such time as the water actually appropriated under it is used for a useful and beneficial purpose in conformity with this division (of the Water Code), but no longer .*

*Section 1392. Every permittee, if he accepts a permit, does so under the conditions precedent that no value whatsoever in excess of the actual amount paid to the State therefor shall at any time be assigned to or claimed for any permit granted or issued under the provisions of this division (of the Water Code), or for any rights granted or acquired under the provisions of this division (of the Water Code), in respect to the regulation by any competent public authority of the services or the price of the services to be rendered by any permittee or by the holder of any rights granted or acquired under the provisions of this division (of the Water Code) or in respect to any valuation for purposes of sale to or purchase, whether through condemnation proceedings or otherwise, by the State or any city, city and county, municipal water district, irrigation district, lighting district, or any political subdivision of the State, of the rights and property of any permittee, or the possessor of any rights granted, issued, or acquired under the provisions of this division (of the Water Code).*
